

Reviewer 1

RECOMMENDATION

Accepted with minor revision

---

The author should add the statistic method, number of replication and also value means Mean $\pm$ SE or SD?

Whenever possible, always convert data into a graph rather than a table.

3The paper is easily to follow. Which is good flow.

In pharmacological journal, animal preparation and general procedure usually combined and entitled as Animal Protocol. Please look at the pharmacological journal as a reference.

If I am not mistaken, the author used a in house PWV (pulse wave velocity) method. The author already add two publication regarding to this in reference. But the author is encourage to give brief explanation regarding to this method..the mechanism, validity and utilization.
