ABSTRACT

Tetanus Toxoid (TT) immunization is one of the preventive efforts to prevent maternal and neonatal tetanus which has a high risk of causing death. Knowledge of pregnant women plays a very important role in supporting the completeness of TT immunization. This study aims to determine the Knowledge of Pregnant Women about Tetanus Toxoid Immunization Based on the Characteristics of Age, Education, Parity, and Occupation at Clinic R Purwadadi District, Subang Regency in 2025. This study used a Quantitative descriptive design with a cross sectional approach. The population in this study were all pregnant women who did pregnancy checks at Clinic R as many as 32 people. The sampling technique used total sampling. The research instrument was a questionnaire, and the data was analyzed univariately. The results showed that less than half were in the Lack of Knowledge category as many as 43.8% of respondents, less than half were less knowledgeable at age <20 years as many as 31.3% of respondents, a small proportion were less knowledgeable in Low Education as many as 21.9% of respondents, less than half were less knowledgeable in primipara as many as 31.3% of respondents, and less than half were less knowledgeable in non-working pregnant women as many as 37.5%.

Keywords: Knowledge, Pregnant Women, Tetanus Toxoid Immunization.
