² Dosen, Fakultas Keperawatan Universitas Bhakti Kencana Bandung

Latar belakang : Menurut data WHO (2017) menunjukkan, total masalah kesehatan jiwa di dunia sekitar 47,5 juta orang menderita demensia, 60 juta orang menderita bipolar, 35 juta orang menderita depresi dan 21 juta menderita skizofrenia. Menurut Yosep & Sutini (2014) menyatakan bahwa pasien dengan diagnosis medis skizofrenia sebanyak 20% mengalami halusinasi pendengaran dan penglihatan secara bersamaan, 70% mengalami halusinasi pendengaran, 20% mengalami halusinasi penglihatan, dan 10% mengalami halusinasi lainnya.

Tujuan : Menganalisis pasien skizofrenia dengan Masalah keperawatan gangguan persepsi Sensori : halusinasi pendengaran. **Metode :** Menggunakan studi kasus yaitu dengan pemberian intervensi strategi pelaksanaan (SP) pada pasien yang mengalami gangguan persepsi sensori: halusinasi pendengaran. Pengumpulan data dilakukan dengan wawancara, observasi dan studi dokumentasi.

Hasil : Setelah diberikan intervensi pasien mampu mengenali halusinasi yang dialaminya, mengontrol halusinasinya, dan menyebutkan manfaat dari program pengobatan.

Kesimpulan: Hasil dari intervensi yang diberikan dengan strategi pelaksanaan terbukti adanya pengaruh pada pasien halusinasi untuk mengontrol halusinasinya.

Kata kunci : Halusinasi pendengaran, Skizofrenia

Background: According to WHO data (2017) shows, a total of mental health problems in the world around 47.5 million people suffer from dementia, 60 million people suffer from bipolar disorder, 35 million people suffer from depression and 21 million suffer from schizophrenia. According to Yosep & Sutini (2014) states that 20% of patients with a medical diagnosis of schizophrenia experience auditory and visual hallucinations simultaneously, 70% experience auditory hallucinations, 20% experience visual hallucinations, and 10% experience other hallucinations. **Objective :** To analyze schizophrenic patients with sensory perception disorder nursing problems: auditory hallucinations. **Methods:** Using case studies, namely by providing implementation strategy interventions (SP) to patients who experience sensory perception disorders: auditory hallucinations. Data collection was carried out by interviews, observation and documentation studies. **Results:** After the intervention was given, the patient was able to recognize the hallucinations he was experiencing, control his hallucinations, and mention the benefits of the treatment program. **Conclusion:** The results of the intervention given with the implementation strategy proved to have an effect on hallucinatory patients to control their hallucinations.

Keywords: Auditory hallucinations, Schizophrenia
