Tuberkulosis merupakan salah satu penyakit dari 10 penyakit penyebab kematian. Data yang di peroleh rekam medis RSUD dr Slamet Garut tercatat jumlah kasus Tuberkulosis Paru berdasarkan data dari Rekam Medik selama tahun 2021 tercatat sebanyak 1317 kasus, diantaranya angka kejadian pasien meninggal sebanyak 65 orang (6,4%). Mengingat, banyaknya pelayanan yang terhambat karena resep tidak lengkap maka perlu dilakukan penelitian untuk melihat kesesuaian resep Tuberkulosis. Tujuan penelitian ini adalah untuk mengetahui kesesuaian pelayanan resep terhadap aspek administratif dan farmasetik pada resep Tuberkulosis di Poli DOTS (*Directly Observed Treatment Shortcourse*) RSUD dr Slamet Garut yang berpedoman pada Permenkes Nomor 72 Tahun 2016 tentang standar pelayanan kefarmasian di Rumah Sakit. Penelitian ini adalah penelitian non-eksperimental yang bersifat deskriptif. Pengumpulan data dilakukan secara retrospektif dengan menggunakan resep rawat jalan di Poli DOTS RSUD dr. Slamet Garut pada bulan Oktober – Desember 2022. Hasil Penelitian ini menunjukkan bahwa ketidaklengkapan aspek administrasi sebesar 85,41% meliputi berat badan 85,4%, alamat pasien 82,3%, jenis kelamin 35,8%, paraf dokter 33% dan nomor SIP dokter 18,8%. Begitupula ketidaklengkapan pada aspek farmasetik sebesar 35,41% meliputi bentuk sediaan 35,4%, kekuatan sediaan 13,9%, aturan pakai 8,7 %. Kesimpulan penelitian ini yaitu masih terdapat ketidaklengkapan pada aspek administrasi dan aspek farmasetik pada resep rawat jalan di Poli DOTS RSUD dr. Slamet Garut.

Kata kunci : Obat anti tuberkulosis, administratif, farmasetik

**PRESCRIPTION REVIEW BASED ON ADMINISTRATIVE AND
PHARMACEUTICAL REQUIREMENTS IN TUBERCULOSIS PATIENTS
AT POLI DOTS (DIRECTLY OBSERVED TREATMENT
SHORTCOURSE) Dr SLAMET GARUT HOSPITAL**

Tuberculosis is one of the top 10 causes of death. The data obtained from the medical records of Dr. Slamet Garut Hospital recorded the number of cases of Pulmonary Tuberculosis based on data from the Medical Records during 2021 there were 1317 cases recorded, including the death rate of 65 people (6.4%). Considering that many services are hampered due to incomplete prescriptions, it is necessary to conduct research to see the suitability of TB prescriptions. The purpose of this study was to determine the suitability of prescription services for administrative and pharmaceutical aspects of TB prescriptions at the DOTS (Directly Observed Treatment Shortcourse) Polyclinic at Dr. Slamet Garut Hospital. which is guided by Permenkes Number 72 of 2016 concerning pharmaceutical service standards in hospitals. This research is a non-experimental research that is descriptive in nature. Data collection was carried out retrospectively using outpatient prescriptions at the DOTS Polyclinic at RSUD dr. Slamet Garut in October – December 2022. The results of this study show that incomplete administrative aspects were 85.41% including weight 85.4%, patient address 82.3%, gender 35.8%, doctor's initials 33% and doctor number Doctor's SIP 18.8%. Likewise, the incompleteness in the pharmaceutical aspect was 35.41%, including 35.4% dosage form, 13.9% dosage strength, 8.7% usage instructions. The conclusion of this study is that there are still incomplete administrative and pharmaceutical aspects of outpatient prescriptions at the DOTS Polyclinic at RSUD dr. Slamet Garut
