

ABSTRAK

Indonesia menghadapi perubahan baru di tahun 2020 sebagai dampak dari pandemi Covid-19. Hal ini dapat menyebabkan situasi berbahaya selama kehamilan. Perilaku adalah suatu kegiatan dimana seseorang merespon sesuatu dan kemudian berubah menjadi kecenderungan berdasarkan kualitas yang diterima. Faktor yang dapat mempengaruhi perilaku yakni faktor sosial di sini mengacu pada segala sesuatu yang ada di sekitar individu. Konformitas melibatkan usaha atau upaya buat merubah sikap seseorang melalui tata cara tentang bagaimana kita wajib berperilaku pada suatu keadaan.

Penelitian ini bertujuan untuk mengetahui hubungan konformitas dengan perilaku pemberian vaksin covid-19 pada ibu hamil di wilayah kerja puskesmas sawah dadap.

Penelitian ini menggunakan rancangan kuantitatif dengan pendekatan *cross sectional*. Sampel penelitian dalam penelitian ini 30 orang yang dipilih sesuai kriteria inklusi menggunakan teknik *consecutive sampling*. Analisa data menggunakan univariat dan bivariat dengan uji *fisher's extract test*.

Hasil analisa menggunakan uji *fisher's extract test* diperoleh nilai $p = 0,026$ (0.05). Dapat disimpulkan hal ini menunjukkan bahwa terdapat hubungan konformitas dengan perilaku pemberian vaksin covid-19 pada ibu hamil di Wilayah Kerja Puskesmas Sawah Dadap. Sehingga peneliti menyarankan supaya pasangan atau suami lebih memberikan dukungan dan petugas kesehatan lebih memberikan motivasi.

ABSTRACT

Indonesia is facing new changes in 2020 as a result of the Covid-19 pandemic. This can lead to dangerous situations during pregnancy. Behavior is an activity in which a person responds to something and then turns into a tendency based on the qualities received. Factors that can influence behavior, namely social factors here refer to everything that is around the individual. Conformity involves trying or trying to change someone's attitude through the way we are supposed to behave in a situation.

This study aims to determine the relationship between conformity and the behavior of giving Covid-19 vaccine to pregnant women in the working area of the Sawah Dadap Health Center.

This study uses a quantitative design with a cross sectional approach. The research sample in this study was 30 people who were selected according to the inclusion criteria using a consecutive sampling technique. Data analysis used univariate and bivariate with fisher's extract test.

The results of the study showed that pregnant women who had moderate conformity and showed the behavior of giving the Covid-19 vaccine to pregnant women were mostly 17 respondents (70.8%). The results of the analysis using the fisher's extract test obtained a p value of 0.026 (0.05). It can be concluded that this shows that there is a relationship between conformity and the behavior of giving the covid-19 vaccine to pregnant women in the Sawah Dadap Health Center Work Area. So the researchers suggest that the spouse or husband should provide more support and the health workers will provide more motivation.
