

**PENGKAJIAN RESEP SECARA ADMINISTRATIF DAN
FARMASETIKA PENYAKIT HIPERTENSI DI KLINIK
PRATAMA BANJARAN**

ABSTRAK

Kajian resep adalah komponen penting dan benar-benar diperlukan dalam mendukung peresepan, yang bermaksud untuk membantu mengurangi kejadian kesalahan obat. Medication error adalah bagian dari pekerjaan penerima resep yang ditulis oleh dokter untuk memecahkan masalah terkait obat dan dijauhkan dari kesalahan pengobatan. Adapun penelitian ini mempunyai tujuan untuk mengkaji kelengkapan resep secara administratif dan secara farmasetika peresepan pasien hipertensi rawat jalan di instalasi farmasi klinik pratama Banjaran. Penelitian yang dilakukan bersifat deskriptif non eksperimental dan pengambilan data atau analisis data dilakukan secara manual dengan melihat lembar resep dan data resep yang masuk dengan pendekatan kuantitatif. Data tersebut diambil dari 60 lembar resep.

Hasil penelitian memberikan hasil pengkajian resep secara administratif yakni meliputi nama pasien 100%, alamat pasien 93,33%, umur pasien 100%, berat badan pasien 41,67%, jenis kelamin pasien 100%, nama dokter 81,67%, no SIP dokter 90%, paraf dokter 10%, tanggal penulisan resep 90%. Pengkajian resep secara farmasetika 100% memenuhi persyaratan. Berdasarkan hasil penelitian, dapat disimpulkan bahwa resep yang dikaji di instalasi farmasi klinik pratama Banjaran terdapat ketidaklengkapan resep secara administratif, sedangkan secara farmasetika kelengkapan resep memenuhi persyaratan.

REVIEW OF PHARMACETIC ADMINISTRATIVE RECIPES FOR HYPERTENSION DISEASE IN PRATAMA BANJARAN CLINIC

ABSTRAC

Prescription review is an important and absolutely necessary component in supporting prescribing, which aims to help reduce the incidence of medication errors. Medication errors are part of the job of the recipient of a prescription written by a doctor to solve drug-related problems and keep medication errors away. The purpose of this study was to examine the completeness of prescriptions administratively and pharmaceutically prescribing outpatient hypertension patients at the Banjaran Pratama clinic pharmacy installation. The research is descriptive non-experimental and data collection or data analysis is done manually by looking at the recipe sheet and the incoming prescription data with a quantitative approach. The data was taken from 60 prescription sheets.

The results of the study provide the results of an administrative prescription review that includes the patient's name 100%, patient address 93.33%, patient age 100%, the patient's weight was 41.67%, the patient's gender was 100%, the doctor's name was 81.67%, the doctor's SIP number was 90%, the doctor's initials were 10%, the prescription date was 90%. Review of prescription pharmaceuticals 100% meets the requirements. Based on the results of the study, it can be concluded that the prescriptions studied at the Banjaran Pratama clinical pharmacy installation were administratively incomplete, while pharmaceutically the completeness of the prescriptions met the requirements.
