ABSTRACT

Background: In the context of dealing with the COVID-19 pandemic, a COVID-19 vaccination policy has been established as an effective intervention to break the chain of transmission of COVID-19. COVID-19 vaccination can be given to children aged 6 to 12 years. Taking into account the studies and recommendations issued by ITAGI, it has been declared safe and must be carried out in accordance with the established procedures. **Research Objectives:** The purpose of this study was to determine the motivation of parents in giving the Covid-19 vaccine to children aged 6-12 years in RW 03 Pakutandang, Ciparay district, Bandung regency. **Research method:** The research method that will be used is descriptive research with a sample of 59, the sampling technique is Stratified Random Sampling, the data is analyzed by univariate analysis. **Research Results:** The results of this study most of the respondents (56%) have moderate intrinsic motivation. The results of the study most of the respondents (64%) had high extrinsic motivation. **Conclusions and Suggestions:** Based on the results of the study, it can be concluded that most of the respondents (52%) have moderate motivation in giving the covid-19 vaccine to children aged 6-12 years in RW 03 Pakutandang, Ciparay District, Bandung Regency. It is hoped that vaccination will continue to be carried out by educating parents to increase immunity in children aged 6-12 years so as to reduce the risk of being exposed to the COVID-19 virus.
