ABSTRAK

Kelengkapan dokumen rekam medis sangat berpengaruh terhadap proses pelayanan kesehatan di rumah sakit karena kelengkapan pengisian rekam medis sebagai salah satu indikator kualitas pelayanan. Tujuan penelitian ini untuk mengeksplorasi fenomena dalam pelaksanaan rekam medis elektronik anestesi. Metode penelitian menggunakan kualitatif dengan desain studi fenomenologi deskriptif. Populasi dalam penelitian adalah penata anestesi. Sample diambil melalui *Purposive Sampling* mendapatkan sebanyak 4 informan dan 1 informan kunci. Instrumen penelitian ini menggunakan record suara, buku, dan pena. Teknik wawancara menggunakan *in depth interview* dengan menggunakan pedoman wawancara kemudian hasilnya dilakukan transkrip data. Didapatkan 4 tema hasil wawancara yaitu manfaat, hambatan, keamanan dan kerahasiaan serta dampak yang dirasakan dalam penggunaan RME. Dalam pelaksanaan rekam medis elektronik dibutuhkan faktor-faktor yang berkontribusi dalam keberhasilan pelaksanaan rekam medis elektronik seperti dukungan SDM, hardware, keuangan, pimpinan, pelatihan dan dukungan teknis. Penerapan RME sudah berjalan tapi belum sepenuhnya menggunakan pengisian dalam rekam medis elektronik dikarenakan masih tetap menggunakan pengisian lembaran tulis tangan. Diharapkan rumah sakit dapat memfasilitasi pelatihan dalam pengisian rekam medis elektronik kepada seluruh penata anestesi dan juga dapat meningkatkan kecepatan jaringan agar tidak mengalami pengisian tidak terhambat.

Kata kunci: dokumentasi, rekam medis elektronik, anestesi, studi fenomenologi

**PHENOMENOLOGICAL STUDY OF THE IMPLEMENTATION OF
ANESTHESIA ELECTRONIC MEDICAL RECORDS AT RSUD R.**

ABSTRACT

The availability of medical records has a major influence on the process of health care in hospitals due to the availabilities of medical record filling as one of the indicators of quality of service. The purpose of this research is to explore phenomena in the implementation of electronic medical records of anesthesia. Research methods use qualitative with design studies of descriptive phenomenology. The population in the study is nurse anesthetist. Sample taken through Purposive Sampling gets as many as 4 informants and 1 key informant. This research instrument uses voice records, books, and pens. The interview technique uses in depth interviews using the interview guidelines and then the results are transcribed. In the implementation of electronic medical records are required the factors that contribute to the success of the electronic medical record implementation such as human resource support, hardware, finance, leadership, training and technical support. The application of RME is already running but has not fully used the filling in electronic medical records as it still uses handwriting filling. It is hoped that the hospital can facilitate training in filling up electronic medical records to the entire anesthesiologist and can also increase the speed of the network so as not to suffer unhindered charging.

Keywords: documentation, electronic medical records, anesthesia, phenomenological studie
