

ABSTRAK

Latar Belakang: Pandemi Covid-19 di Indonesia telah mengalami penurunan kasus aktif yang cukup signifikan, Angka penurunan kasus aktif Covid-19 terus menurun secara konsisten sejak akhir Februari 2022 lalu. Berdasarkan hasil riset varian covid-19 masih terus berkembang, sehingga prokes masih tetap diterapkan. **Penelitian ini bertujuan** untuk mengetahui sikap masyarakat tentang pencegahan covid-19 di Rw.09 Desa Neglasari Kecamatan Majalaya Tahun 2022. Sikap seseorang mempunyai peran penting dalam perilaku pencegahan virus covid-19 dikarenakan secara teori sikap dapat langsung mempengaruhi individu untuk berperilaku dalam pencegahan Covid19. **Penelitian ini menggunakan metode** deskriptif, Populasi dalam penelitian ini adalah masyarakat Rw.09 sebanyak 242 Kartu Keluarga dengan teknik pengambilan sampel *stratified proportional random sampling* sehingga jumlah sampel menjadi 73 responden. Instrumen menggunakan kuisioner. Analisis univariat menggunakan skala ukur hasil dari mean skor $< 67,9\%$ dan skor $\geq 67,9\%$. **Hasil penelitian** sebagian besar responden memiliki sikap positif (60%) dan sebagian dari responden yang memiliki sikap negatif (40%). Ditunjukkan dengan jawaban responden yang menyatakan hanya orang sakit dengan gejala seperti flu yang harus menggunakan masker untuk mencegah penyebaran Covid-19. **Kesimpulan** sebagian besar responden memiliki sikap positif (60%), **Saran** Perlu Kerjasama dari puskesmas untuk selalu mengingatkan masyarakat, walaupun ada kelonggaran tentang protokol kesehatan, tetapi masker tetap harus digunakan jika keluar rumah, cuci tangan tetap dilakukan apabila telah beraktifitas, dan jika berkerumun tetap selalu menjaga protokol kesehatannya.

ABSTRACT

Background: The Covid-19 pandemic in Indonesia has experienced a significant decline in active cases. The decline in active cases of Covid-19 has continued to decline consistently since the end of February 2022. Based on the results of research, the Covid-19 variant is still developing, so the process is still being implemented. This study aims to determine the attitude of the community regarding the prevention of covid-19 in Rw.09 Neglasari Village, Majalaya District in 2022. A person's attitude has an important role in the behavior of preventing the covid-19 virus because theoretically attitudes can directly influence individuals to behave in preventing Covid19. This study uses a descriptive method. The population in this study is the community of Rw.09 as many as 242 Family Cards with a stratified proportional random sampling technique so that the number of samples becomes 73 respondents. Instrument using a questionnaire. Univariate analysis used a measuring scale with a score of $< 67,9\%$. and a score of $\geq 67,9\%$. The results of the study most of the respondents had a positive attitude (60%) and some of the respondents had a negative attitude (40%). This is indicated by the respondent's answer stating that only sick people with flu-like symptoms must wear masks to prevent the spread of Covid-19. The conclusion is that most respondents have a positive attitude, Suggestions Need Cooperation from the puskesmas to always remind the public, even though there are leniency about health protocols, but masks must still be used when leaving the house, washing hands should still be done if you have been active, and if you are in a crowd, always maintain the health protocol.
