ABSTRAK

Rumah sakit mempunyai peran penting dalam meningkatkan derajat kesehatan masyarakat, memberikan pelayanan kesehatan yang baik merupakan bentuk kepuasan bagi masyarakat. Asuhan keperawatan yang berkualitas menentukan pelayanan kesehatan yang berkualitas juga. Untuk membuat asuhan keperawatan yang berkualitas, perawat harus memiliki tingkat pengetahuan yang baik, khususnya pendokumentasian. pada saat rumah sakit edelweiss melaksanakan akreditasi terdapat masukan dari surveior diharuskan asuhan keperawatan menggunakan SDKI, SLKI dan SIKI di Edelweiss Hospital, PPNI telah membuat standar asuhan keperawatan yang meliputi standar diagnosis keperawatan Indonesia, standar luaran keperawatan Indonesia dan standar intervensi keperawatan Indonesia. Hal tersebut telah di sahkan oleh menteri kesehatan melalui keputusan menteri kesehatan atau KMK No. HK-01-07-MENKES-425-2020 tentang standar profesi Perawat. Tujuan dari penelitian ini adalah untuk mengetahui tingkat pengetahuan perawat tentang SDKI, SLKI, SIKI. Penelitian ini deskriptif kuantitatif dengan menggunakan *cross sectional*. Populasi dalam penelitian ini 121 perawat dan sampel yang digunakan 93 perawat dengan teknik *quota sampling*. Hasil penelitian menunjukkan sebanyak 56 perawat (58,3%) memiliki pengetahuan yang kurang mengenai SDKI, SLKI, SIKI, 90 perawat (93%) perawat berusia 20-40 tahun, 55 perawat (57,3%) berpendidikan DIII Keperawatan, 31 perawat (32,3%) sudah mengetahui SDKI, SLKI, SIKI saat masih kuliah, 33 perawat (34,4%) memiliki pengalaman bekerja 1-3 tahun. Disarankan Rumah Sakit dapat meningkatkan lagi perwatan melalui kegiatan-kegiatan seperti pelatihan yang dapat meningkatkan pengetahuan perawat mengenai SDKI, SLKI, SIKI

Kata Kunci : Pengetahuan, Perawatan, SDKI, SLKI, SIKI

ABSTRACT

Hospitals have an important role in improving the level of public health, providing good health services is a form of satisfaction for the community. Quality nursing care determines quality health services as well. To provide quality nursing care, nurses must have a good level of knowledge, especially documentation. When Edelweiss Hospital carried out accreditation, there was input from surveyors that it required nursing care to be used SDKI, SLKI and SIKI at Edelweiss Hospital PPNI has made nursing care standards which include Indonesian nursing diagnosis standards, Indonesian nursing output standards and Indonesian nursing intervention standards. This has been ratified by the minister of health through the decree of the minister of health or KMK No. HK-01-07-MENKES-425-2020 concerning Nurse professional standards. The purpose of this study was to determine the level of knowledge of nurses about SDKI, SLKI, SIKI. This study was descriptive quantitative using cross sectional. The population in this study was 121 nurses and the sample used 93 nurses with the qouta sampling technique. The results showed that as many as 56 nurses (58.3%) had less knowledge about SDKI, SLKI, SIKI, 90 nurses (93%) nurses aged 20-40 years, 55 nurses (57.3%) had DIII Nursing education, 31 nurses (32.3%) already knew SDKI, SLKI, SIKI when they were in college, 33 nurses (34.4%) had 1-3 years of work experience. It is recommended that hospitals can improve nursing through activities such as training that can increase nurses' knowledge about SDKI, SLKI, SIKI

Keywords : Knowledge, Care, SDKI, SLKI, SIKI
